GREEN ACRES
HYDROMULCHING
PLANT HIRE.

We offer a **complete package**
to suit our client's needs.

COMPANY PROFILE

Green Acres Hydromulching specialises in the provision of a high quality service to their clients, ensuring all of their erosion control, amelioration, revegetation and watering requirements and plant hire is managed effectively and to a high standard.

We provide full mine specified equipment with a fleet comprising of several Hydromulching units, Moxi dump trucks, tractors (seeders, offset discs and spreaders), and water trucks ranging from 16,000 - 60,000 litre capacity, including a Moxi Articulated Watercart. Our company is also AFM (Advanced Fatigue Management) accredited.

Green Acres Hydromulching also offer earth moving equipment and plant hire including; backhoe, tip trucks (10T, side tippers and road train configurations), posi track, excavator and grader. We supply a complete package.

GAH offer a wide range of water trucks, complete with long range high pressure water cannons and in cab controls, with experienced operators to manage all of your dust suppression and watering requirements. Our water truck operators are highly trained in the management of effective watering programs.

We provide site maintenance and landscaping services such as tube stock planting and turf installation. Our maintenance services include; mowing, slashing, brush cutting and weed management. Having undergone training with Agricultural Chemicals Distribution Control (ACDC), we are highly experienced in the identification and management of weeds. We also have our

own GAH in-house certified Weed and Seed Inspector, trained and specialising in weed hygiene and the inspection and cleaning of vehicles and equipment.

Hydromulching is widely used in the revegetation of disturbed areas within the civil engineering, mining and land development industries, especially on slopes where there is a significant risk of erosion occurring during the period of initial plant establishment. Steep and inaccessible areas can be revegetated through the use of canons mounted on all trucks spraying up to 70 meters plus a retractable 500ft pressure hose.

We service the mining industry, civil construction, gas pipelines and main roads, commercial and other industrial projects nationally.

With high quality equipment and experienced Management and Staff, Green Acres Hydromulching welcome an opportunity to work with you and create a package made specifically to suit your project's requirements.

Our extensive fleet allows us to complete a full scope of works for our clients from haulage, amelioration, seeding, watering, dust suppression, establishment and maintenance.
